

OE-EC804C

Organizational Behavior

Combined Module Notes

Modules 1 – 4

Semester

CGEC | B.Tech ECE (2023–27)

Disclaimer / Study Guide Notice:

These are condensed **Short Notes** focusing on core theory, key formulas, block/circuit diagrams, and standard viva Q&As for university exam revision. Exhaustive numerical practice problems and derivation edge cases are not covered. This serves as a quick-revision reference guide for students.

Exam-Ready Notes

Contents

Module 1: Meaning and Definition of Organization	4
1 Meaning and Definition of Organization	4
1.1 Key Components of an Organization	4
1.2 Formal vs. Informal Organizations	4
2 Features and Principles of Organization	5
2.1 Key Features of an Organization	5
2.2 Henri Fayol's Principles of Management / Organization	5
3 Organizational Structures	6
3.1 Types of Organizational Structures	6
3.2 Structural Comparison: Functional vs. Matrix Structure	6
4 Nature and Scope of Organizational Behavior (OB)	7
4.1 The 5 Fundamental Models of Organizational Behavior	7
Module 2: Personality: Concept and Determinants	10
1 Personality: Concept and Determinants	10
1.1 Determinants of Personality	10
1.2 Personality Development: Theories and Stages	10
2 Personality Theories and Applications in OB	11
2.1 The Big Five Personality Traits Model (OCEAN)	11
2.2 Major Personality Attributes Influencing OB	11
3 Motivation: Concepts and Theories	12
3.1 The Motivation-Behavior Process	12
3.2 Maslow's Hierarchy of Needs Theory	12
3.3 Herzberg's Two-Factor (Hygiene-Motivator) Theory	12
3.4 McGregor's Theory X and Theory Y	13
4 Elements of Sound Motivational System & Indian Context	13
4.1 Elements of a Sound Motivational System	13
4.2 Motivation in Indian Organizations	14
Module 3: Leadership: Concepts and Theories	17
1 Leadership: Concepts and Theories	17
1.1 Distinction: Manager vs. Leader	17
1.2 Major Theories of Leadership	17
1.3 Blake-Mouton Managerial Grid Styles	18
2 Leadership Styles and Indian Corporate Context	18
2.1 Classical Leadership Styles	18
2.2 Transformational vs. Transactional Leadership	18

2.3	Leadership in Indian Organizations	18
3	Group Dynamics and Stages of Development	19
3.1	Types of Groups	19
3.2	Tuckman's 5 Stages of Group Development	19
3.3	Group Behavior: Norms, Cohesiveness, and Roles	19
4	Group Decision Making: Techniques, Merits, and Demerits	20
4.1	Techniques to Improve Group Decision Making	20
4.2	Merits and Demerits of Group Decision Making	20
Module 4: Meaning and Nature of Organizational Change		23
1	Meaning and Nature of Organizational Change	23
1.1	Nature of Change	23
1.2	Factors Driving Organizational Change	23
2	Resistance to Change and Overcoming Strategies	23
2.1	Factors Causing Resistance	24
2.2	Lewin's 3-Step Change Model	24
2.3	Kotter's 8-Step Leading Change Model	24
2.4	Strategies for Overcoming Resistance	25
3	Organizational Development (OD): Concept, Process, and Interventions	25
3.1	Core Objectives of OD	25
3.2	The 4-Stage OD Process	25
3.3	Major OD Interventions	26

Module 1

Meaning and Definition of Organization

1. Meaning and Definition of Organization

An **Organization** is a structured social entity consisting of a group of people working together in a coordinated manner to achieve specific, pre-determined organizational goals and objectives.

Definition of Organization

An **Organization** is a consciously coordinated social unit, composed of two or more people, that functions on a relatively continuous basis to achieve a common goal or set of goals (Stephen P. Robbins).

1.1 Key Components of an Organization

Every modern engineering or corporate organization comprises four essential elements:

1. **People:** The human resource (employees, managers, leaders) who form the internal social system.
2. **Structure:** The formal relationships, roles, hierarchy, and division of authority that dictate how work is divided and coordinated.
3. **Technology:** The physical tools, machinery, software algorithms, processes, and techniques used to transform inputs into outputs.
4. **Environment:** The external political, economic, social, technological, legal, and ecological (PESTLE) forces operating outside the organizational boundary.

1.2 Formal vs. Informal Organizations

Organizations operate through two parallel structural dimensions:

Feature	Formal Organization	Informal Organization
Origin & Creation	Deliberately established by top management via official policies & org charts.	Spontaneously formed by employees based on personal relationships & common interests.
Structure	Well-defined, rigid hierarchy of authority and delegated positions.	Unstructured, flexible, and fluid social network.
Communication Channel	Official channels (chain of command, memo, email protocols).	Unofficial channel (grapevine, social chatter, coffee breaks).
Primary Focus	Goal achievement, productivity, efficiency, and task execution.	Individual social satisfaction, belongingness, and emotional support.
Leadership	Appointed managers with legitimate positional power.	Natural/informal leaders emerging from group acceptance and charisma.

2. Features and Principles of Organization

2.1 Key Features of an Organization

- **Division of Labor:** Complex tasks are broken down into specialized jobs to optimize productivity.
- **Hierarchy of Authority:** A scalar chain of command defining superior-subordinate reporting lines.
- **Common Objectives:** Alignment of individual and departmental activities toward overarching organizational goals.
- **Coordination:** Systematic integration of diverse departmental efforts to eliminate redundancy.
- **Continuity & Permanence:** Designed to exist beyond the tenure of individual founders or employees.

2.2 Henri Fayol's Principles of Management / Organization

Classical administrative theory, articulated by **Henri Fayol**, lays down fundamental principles for organizing enterprises:

Core Administrative Principles (Fayol)

1. **Division of Work:** Specialization increases output by making employees more efficient.
2. **Authority & Responsibility:** Right to give orders backed by obligation to answer for outcomes.
3. **Unity of Command:** Each subordinate receives orders from **one and only one**

superior.

4. **Unity of Direction:** One head and one plan for a group of activities having the same objective.
5. **Scalar Chain:** The unbroken chain of authority extending from top executive to lowest level.
6. **Span of Control:** The optimal number of subordinates a manager can directly supervise effectively.

3. Organizational Structures

An **Organizational Structure** defines how tasks are formally divided, grouped, and coordinated across departments and management levels.

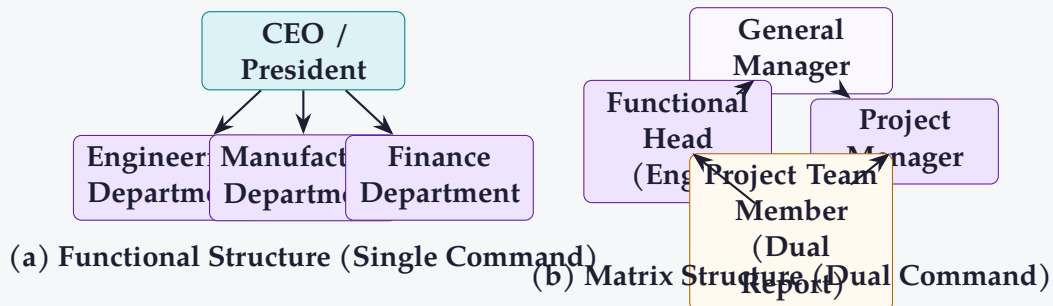

3.1 Types of Organizational Structures

1. **Functional Structure:** Grouping employees into departments based on specialized skills/functions (e.g., R&D, Engineering, Marketing, Finance, HR).
2. **Divisional Structure:** Self-contained units organized around products, geographic regions, or customer segments.
3. **Matrix Structure:** A dual-authority structure combining functional departments with project/product teams. Employees report to both a Functional Manager and a Project Manager.
4. **Line and Staff Structure:** Combines direct operational line managers (with command authority) with staff specialists (advisors providing legal, technical, or HR support).

3.2 Structural Comparison: Functional vs. Matrix Structure

Attribute	Functional Structure	Matrix Structure
Chain of Command	Single reporting line (Unity of command maintained).	Dual reporting line (Violates unity of command).
Resource Sharing	High functional specialization; low cross-functional sharing.	Dynamic sharing of specialists across multiple project teams.
Flexibility	Rigid, slow response to market shifts.	Highly adaptive and responsive to complex project demands.
Conflict Potential	Low internal role ambiguity; potential silo formation between functions.	High potential for authority conflict between functional & project managers.
Cost Efficiency	High economies of scale within functional departments.	Higher administrative overhead due to dual managerial roles.

Comparison of Functional and Matrix Organizational Structures

4. Nature and Scope of Organizational Behavior (OB)

Organizational Behavior (OB) is an applied behavioral science field that investigates the impact of individuals, groups, and organizational structure on behavior within organizations, for the purpose of applying such knowledge toward improving organizational effectiveness.

Nature of Organizational Behavior

OB is a **multidisciplinary field** drawing concepts from Psychology (individual level), Sociology & Social Psychology (group level), and Anthropology & Political Science (organization system level). It is humanistic, goal-oriented, and science-backed.

4.1 The 5 Fundamental Models of Organizational Behavior

Organizational culture and managerial philosophy dictate the dominant OB model adopted by a firm:

Dimension	Autocratic	Custodial	Supportive	Collegial	System
Basis of Model	Power / Authority	Economic resources	Leadership	Partnership	Community
Managerial Orientation	Authority	Money / Benefits	Support	Teamwork	Nurturing
Employee Orientation	Obedience	Security & Benefit	Job performance	Responsibility	Self-discipline
Employee Psychological Result	Dependence on boss	Dependence on organization	Participation	Self-actualization	Passion & Commitment
Employee Needs Met	Subsistence (Basic)	Security	Esteem	Self-actualization	Higher-order needs

Quick Revision — Module 1

Introduction to Organization & Organizational Behavior | OE-EC804C

Key Concepts and Metrics at a Glance

Organization	Social entity consciously coordinated to achieve pre-determined common goals.
Formal vs Informal Org	Official hierarchical structure vs. spontaneous personal social network (grapevine).
Fayol's Unity of Command	Principle stating each employee reports to one and only one direct manager.
Matrix Structure	Dual-authority structure combining functional specialization with project teams.
OB Field Basis	Multidisciplinary study of individual, group, and structural impact on behavior.
5 OB Models	Autocratic (Power), Custodial (Security), Supportive (Leadership), Collegial (Teamwork), System (Community).

One-Line Definitions for Exam Revision

- **Span of Control:** The maximum number of subordinates a manager directly and effectively supervises.
- **Grapevine:** The informal, un official communication channel operating within an organization.
- **Scalar Chain:** The unbroken vertical chain of command from highest executive to lowest worker.
- **Organizational Structure:** The formal framework defining how job tasks are divided, grouped, and coordinated.

Frequently Asked / Viva Questions

1. Define an Organization. What are its core components?

An organization is a consciously coordinated social unit of two or more people working continuously toward common goals. Its core components are People, Structure, Technology, and Environment.

2. Differentiate between Formal and Informal Organizations.

Formal organizations are officially created by management with rigid hierarchies and written rules. Informal organizations emerge spontaneously among employees to fulfill personal social needs.

3. What is Fayol's Unity of Command principle? Why is it important?

Frequently Asked / Viva Questions (contd.)

It states that an employee should receive orders from only one manager. It prevents dual-subordination conflict, confusion, and responsibility shifting.

4. Explain the Matrix Organizational Structure and its major drawback.

A matrix structure combines functional departments with project teams, creating a dual reporting line. Its main drawback is potential conflict of authority between functional and project managers.

5. What is Organizational Behavior (OB)?

OB is an applied behavioral science field studying how individuals, groups, and organizational structures influence behavior, aiming to enhance organizational performance.

6. List the 5 primary models of Organizational Behavior.

Autocratic (power-based), Custodial (money-based), Supportive (leadership-based), Collegial (teamwork-based), and System (community-based).

7. What is Span of Control? Distinguish between Tall and Flat structures.

Span of control is the number of direct subordinates under a manager. A narrow span produces a Tall structure (many hierarchy levels); a wide span produces a Flat structure (few hierarchy levels).

8. How does Psychology contribute to Organizational Behavior?

Psychology provides theories on individual behavior, learning, personality, perception, motivation, and job satisfaction.

9. What is the difference between Line and Staff managers?

Line managers have direct command authority over operational tasks; Staff managers act as advisors providing specialized technical, legal, or HR guidance.

10. Which OB model is oriented towards meeting employee security needs?

The Custodial model, which relies on economic resources and benefits to fulfill employee safety and financial security needs.

Module 2

Personality: Concept and Determinants

1. Personality: Concept and Determinants

Personality represents the relatively stable set of psychological characteristics, behavioral patterns, and emotional tendencies that shape how an individual interacts with their environment.

Definition of Personality

Personality is the dynamic organization within the individual of those psychophysical systems that determine their unique adjustments to their environment (Gordon Allport).

1.1 Determinants of Personality

An individual's personality is shaped by four major determinants:

1. **Heredity (Biological Factors):** Genetic traits inherited from parents (temperament, physical stature, reflexes, facial features). Twins studies show genetics accounts for nearly 50% of personality variation.
2. **Environmental Factors:** Socialization, family background, upbringing, social status, and educational experiences during early childhood.
3. **Cultural Factors:** Cultural norms, values, beliefs, and societal expectations that dictate acceptable behavior.
4. **Situational Factors:** Specific events, crises, or work situations that constrain or draw out specific personality dimensions.

1.2 Personality Development: Theories and Stages

Personality development refers to the process by which an individual's unique behavioral patterns and psychological structures evolve over time:

1. **Freud's Psychoanalytic Theory:** Personality consists of three interacting structural systems:
 - *Id*: Unconscious, primitive drive operating on the pleasure principle.
 - *Ego*: Realistic, conscious executive operating on the reality principle.

- *Superego*: Moral conscience representing societal norms and ethical ideals.
2. **Erikson's 8 Psychosocial Stages**: Personality evolves through 8 life stages characterized by specific psychosocial crises (e.g., Trust vs. Mistrust, Identity vs. Role Confusion, Industry vs. Inferiority).
 3. **Argyris' Immaturity-Maturity Continuum**: Chris Argyris proposed that individuals naturally progress along a continuum from infant **immaturity** (passive, dependent, short-term perspective) to adult **maturity** (active, independent, long-term perspective, self-awareness).

2. Personality Theories and Applications in OB

2.1 The Big Five Personality Traits Model (OCEAN)

The **Big Five Model** is the most widely validated framework for assessing personality traits in business settings:

Trait	High Score Characteristics	Organizational Impact
Openness to Experience	Creative, curious, imaginative, insightful, flexible.	Adapts quickly to organizational change & innovation.
Conscientiousness	Organized, dependable, thorough, disciplined, goal-driven.	Single strongest predictor of overall job performance.
Extraversion	Sociable, assertive, energetic, outgoing, talkative.	Performs exceptionally in sales, leadership, & networking.
Agreeableness	Cooperative, trusting, empathetic, warm, helpful.	Excels in teamwork, customer service, & conflict resolution.
Emotional Stability (vs. Neuroticism)	Calm, self-confident, secure, stress-resilient.	High job satisfaction; low occupational burnout.

2.2 Major Personality Attributes Influencing OB

- **Locus of Control**: Belief about who controls destiny.
 - *Internals*: Believe outcomes stem from their own effort. Higher job satisfaction & performance.
 - *Externals*: Believe outcomes are driven by luck, fate, or external power. Higher stress.
- **Machiavellianism (High-Mach)**: Pragmatic, emotionally distant, and believes "the end justifies the means". Excels in high-stakes negotiations.
- **Type A vs. Type B Personality**:
 - *Type A*: Impatient, competitive, time-conscious, aggressive. Prone to work stress.
 - *Type B*: Relaxed, patient, steady, non-competitive. Better long-term strategic thinkers.

- **Self-Monitoring:** Ability to adjust behavior to external situational factors. High self-monitors are adept at political maneuvering.

3. Motivation: Concepts and Theories

Motivation is the psychological process that initiates, directs, and sustains goal-oriented human behavior.

Definition of Motivation

Motivation is the willingness to exert high levels of effort toward organizational goals, conditioned by the effort's ability to satisfy some individual need (Robbins).

3.1 The Motivation-Behavior Process

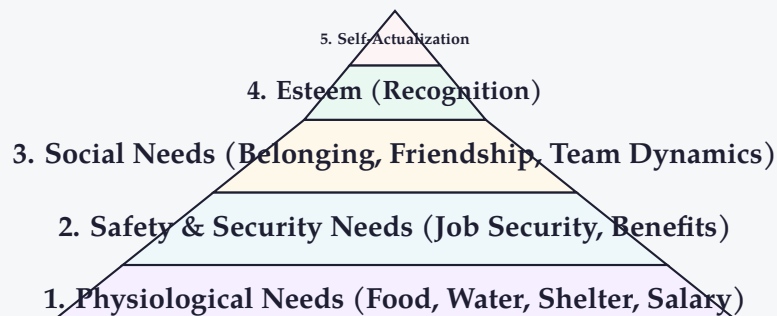

The 6-Stage Motivation-Behavior Process

3.2 Maslow's Hierarchy of Needs Theory

Abraham Maslow posited that human needs are arranged in a 5-level hierarchy. Individuals satisfy lower-order needs before progressing to higher-order needs:

Maslow's Hierarchy of Needs Pyramid

3.3 Herzberg's Two-Factor (Hygiene-Motivator) Theory

Frederick Herzberg proposed that job satisfaction and job dissatisfaction are driven by two independent sets of factors:

Dimension	Hygiene Factors (Extrinsic)	Motivators (Intrinsic)
Primary Impact	Prevents job dissatisfaction (does NOT create motivation).	Generates high job satisfaction & intrinsic motivation.
Factors	Salary, company policies, working conditions, job security, supervision.	Achievement, recognition, responsibility, advancement, work itself.
Absence Result	Severe job dissatisfaction.	Neutral state (no satisfaction, but no dissatisfaction).

3.4 McGregor's Theory X and Theory Y

Douglas McGregor formulated two contrasting views of human workforce motivation:

Assumption Area	Theory X (Authoritarian View)	Theory Y (Participative View)
Attitude Toward Work	Inherently dislike work and avoid it whenever possible.	View work as natural as play or rest.
Ambition & Responsibility	Lack ambition, avoid responsibility, seek direction.	Exercise self-direction, seek responsibility.
Managerial Strategy	Strict control, coercion, punishment, close supervision.	Empowerment, delegation, participative decision-making.
Primary Motivator	Lower-order physiological & safety needs.	Higher-order esteem & self-actualization needs.

4. Elements of Sound Motivational System & Indian Context

4.1 Elements of a Sound Motivational System

A comprehensive managerial motivation strategy integrates financial and non-financial rewards:

- **Fair & Competitive Compensation:** Merit-based pay, profit sharing, and performance bonuses.
- **Job Enrichment:** Expanding job content vertically by giving greater autonomy, responsibility, and decision-making power.
- **Job Enlargement:** Expanding job content horizontally by adding a wider variety of similar tasks to eliminate monotony.
- **Employee Recognition Programs:** Awards, promotions, and public praise.

4.2 Motivation in Indian Organizations

Motivation strategies in Indian corporate environments account for cultural nuances (collectivism, respect for hierarchy, family orientation):

- High value placed on **job security** and institutional stability.
- Paternalistic leadership style offering personal care alongside professional direction.
- Growing shift toward performance-linked incentives (PLI) and stock options (ESOPs) in tech startups and IT sectors.

Quick Revision — Module 2

Personality and Motivation | OE-EC804C

Key Concepts and Metrics at a Glance

Big Five OCEAN	Openness, Conscientiousness, Extraversion, Agreeableness, Neuroticism.
Locus of Control	Internal (effort controls outcomes) vs. External (luck/fate controls outcomes).
Maslow's Hierarchy	5-stage needs pyramid: Physiological → Safety → Social → Esteem → Self-Actualization.
Herzberg Two-Factor	Hygiene factors (salary/policy prevent dissatisfaction) vs. Motivators (responsibility/recognition build satisfaction).
Theory X vs Theory Y	Lazy, coercive workforce view (Theory X) vs. Self-motivated, creative workforce view (Theory Y).

One-Line Definitions for Exam Revision

- **Conscientiousness:** Big Five trait reflecting organization, dependability, and goal discipline.
- **Machiavellianism:** Personality attribute characterized by emotional detachment and belief that ends justify means.
- **Job Enrichment:** Vertical expansion of job duties to increase employee autonomy and responsibility.
- **Hygiene Factors:** Extrinsic job factors whose presence prevents dissatisfaction but does not motivate.

Frequently Asked / Viva Questions

1. Define Personality. What are its four main determinants?

Personality is the dynamic organization of psychophysical systems determining an individual's unique adjustment to environment. Determinants: Heredity, Environment, Culture, and Situation.

2. List the Big Five personality traits (OCEAN). Which trait best predicts job performance?

Openness, Conscientiousness, Extraversion, Agreeableness, and Neuroticism (Emotional Stability). Conscientiousness is the single best predictor of overall job performance.

3. Differentiate between Internal and External Locus of Control.

Internals believe their own efforts determine success/failure; Externals believe outcomes are dictated by outside forces like luck, fate, or powerful people.

4. Compare Type A and Type B personalities.

Frequently Asked / Viva Questions (contd.)

Type A individuals are impatient, competitive, aggressive, and time-driven; Type B individuals are relaxed, steady, patient, and less prone to stress.

5. Explain Maslow's Need Hierarchy Theory.

Maslow proposed human needs follow a 5-tier pyramid: Physiological, Safety, Social, Esteem, and Self-Actualization. Individuals must fulfill lower-level needs before higher-level needs motivate them.

6. What are Hygiene Factors according to Herzberg? Give examples.

Hygiene factors are extrinsic job elements (salary, company policy, working conditions) that prevent job dissatisfaction when present, but do not create positive motivation.

7. Contrast McGregor's Theory X and Theory Y.

Theory X assumes workers are inherently lazy, dislike responsibility, and require coercion; Theory Y assumes workers are self-motivated, creative, and seek responsibility.

8. What is the difference between Job Enlargement and Job Enrichment?

Job Enlargement expands work horizontally by adding similar tasks; Job Enrichment expands work vertically by adding autonomy, planning, and control.

9. Define Machiavellianism in an organizational context.

It is a personality trait where an individual is pragmatic, maintains emotional distance, and manipulates situations believing the end justifies the means.

10. What factors influence employee motivation in Indian organizations?

Job security, family-oriented benefits, respect for hierarchy, paternalistic leadership, and performance-linked incentives.

Module 3

Leadership: Concepts and Theories

1. Leadership: Concepts and Theories

Leadership is the process of influencing, motivating, and directing followers toward the achievement of organizational vision and objectives.

Definition of Leadership

Leadership is the ability to influence a group toward the achievement of a vision or set of goals (Stephen P. Robbins).

1.1 Distinction: Manager vs. Leader

Dimension	Manager	Leader
Source of Power	Formal positional authority granted by organization.	Personal influence, charisma, and follower trust.
Primary Orientation	Planning, budgeting, organizing, controlling, stability.	Setting vision, aligning people, inspiring, driving change.
Focus	Systems, structures, processes, efficiency.	People, relationships, values, culture.
Time Horizon	Short-term to medium-term operational targets.	Long-term strategic vision.

1.2 Major Theories of Leadership

- Trait Theory (Great Man Theory):** Assumes leaders possess inherent physical, intellectual, and personality traits (intelligence, self-confidence, integrity, drive, emotional maturity).
- Behavioral Theories:** Focuses on specific observable behaviors rather than traits.
 - Ohio State Studies:* Identified two dimensions — **Initiating Structure** (task-oriented) and **Consideration** (people-oriented).
 - Michigan Studies:* Identified **Production-Oriented** vs. **Employee-Oriented** leadership behaviors.

- *Blake-Mouton Managerial Grid*: 9x9 matrix plotting **Concern for Production** vs. **Concern for People**.

3. **Contingency / Situational Theories**: Effective leadership depends on matching leadership style to situational variables (Fiedler's Contingency Model, Hersey-Blanchard Situational Leadership).

1.3 Blake-Mouton Managerial Grid Styles

- **Impoverished Management (1,1)**: Low production, low people concern (minimal effort).
- **Country Club Management (1,9)**: High people concern, low production concern (friendly atmosphere, low output).
- **Task / Authority Management (9,1)**: High production concern, low people concern (autocratic efficiency).
- **Middle-of-the-Road Management (5,5)**: Balanced, adequate performance.
- **Team Management (9,9)**: High production, high people concern (**Optimal style**).

2. Leadership Styles and Indian Corporate Context

2.1 Classical Leadership Styles

- **Autocratic (Authoritarian)**: Centralized decision-making; top-down commands without subordinate participation. Effective in emergency/crisis situations.
- **Democratic (Participative)**: Decentralized decision-making; subordinate participation encouraged. Fosters commitment and high morale.
- **Laissez-Faire (Free-Rein)**: Complete freedom granted to subordinates; leader acts as passive resource provider. Effective only with highly skilled experts.

2.2 Transformational vs. Transactional Leadership

Feature	Transactional Leadership	Transformational Leadership
Core Mechanism	Exchange process (rewards for compliance, punishment for failure).	Inspires followers to transcend self-interest for organizational vision.
Focus	Maintaining current operations & status quo.	Driving organizational change, innovation, & renewal.
Key Components	Contingent Reward, Management by Exception (Active/Passive).	Idealized Influence, Inspirational Motivation, Intellectual Stimulation.
Impact	Expected standard performance.	Performance beyond expectations.

2.3 Leadership in Indian Organizations

Indian corporate leadership is uniquely characterized by:

- **Paternalistic Approach:** Combining firm authority with nurturance, family-like care, and guidance.
- High respect for age, seniority, and organizational hierarchy.
- Rapid transition toward participative, transformational leadership in technology and global enterprise sectors.

3. Group Dynamics and Stages of Development

A **Group** consists of two or more interacting individuals who come together to achieve particular objectives.

Concept of Group Dynamics

Group Dynamics refers to the complex social forces, interactions, processes, and behavioral patterns operating within and between human groups.

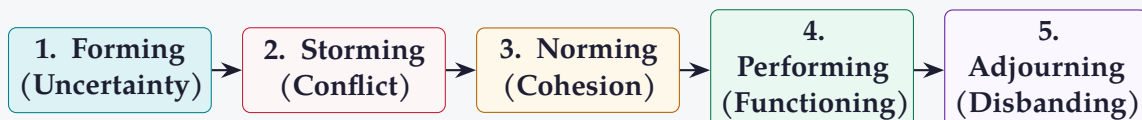

3.1 Types of Groups

- **Formal Groups:** Created by management (Command Groups, Task Forces, Committees).
- **Informal Groups:** Spontaneously formed by members (Interest Groups, Friendship Groups).

3.2 Tuckman's 5 Stages of Group Development

Groups evolve through five sequential stages during their lifecycle:

Tuckman's 5 Stages of Group Development

1. **Forming:** Initial orientation, high uncertainty, testing boundaries and group purpose.
2. **Storming:** Intra-group conflict, power struggles, resistance to group constraints.
3. **Norming:** Close relationships develop, strong group identity, consensus on norms.
4. **Performing:** Group structure becomes fully functional and accepted; focus shifts to task execution.
5. **Adjourning:** Disbanding after goal completion (for temporary task groups).

3.3 Group Behavior: Norms, Cohesiveness, and Roles

Understanding group behavior requires analyzing three fundamental properties:

1. **Group Norms:** Acceptable standards of behavior shared by group members (performance norms, appearance norms, social arrangement norms).

2. **Group Cohesiveness:** The degree to which group members are attracted to each other and motivated to stay in the group.
 - *High Cohesiveness + High Performance Norms:* Results in **highest productivity**.
 - *High Cohesiveness + Low Performance Norms:* Results in **low productivity** (group restricts output).
3. **Group Conformity & Asch Effect:** The tendency for members to align their perceptions, opinions, and behaviors with group norms due to social pressure.

4. Group Decision Making: Techniques, Merits, and Demerits

4.1 Techniques to Improve Group Decision Making

1. **Brainstorming:** Idea-generation process encouraging free thinking without criticism.
2. **Nominal Group Technique (NGT):** Structured meeting where members write ideas independently before silent voting to prioritize solutions.
3. **Delphi Technique:** Systematic decision process collecting anonymous expert opinions via sequential questionnaires without physical meeting.
4. **Electronic Meetings:** Combining NGT with computer networking for anonymous real-time voting.

4.2 Merits and Demerits of Group Decision Making

Merits / Advantages	Demerits / Disadvantages
Complete Information & Knowledge: Aggregates diverse expertise, skills, and perspectives.	Time-Consuming: Takes longer to schedule, discuss, and reach consensus compared to individual decisions.
Increased Acceptance: Participants feel ownership, leading to smoother implementation.	Groupthink: Conformity pressure suppresses critical, divergent thinking.
Diversity of Views: Generates more alternatives and creative solutions.	Domination by Few: Vocal or influential members can dominate discussions.
Legitimacy: Democratic consensus decisions are perceived as more legitimate.	Ambiguous Responsibility: Shared accountability dilutes individual responsibility.

Quick Revision — Module 3

Leadership and Group Dynamics | OE-EC804C

Key Concepts and Metrics at a Glance

Manager vs Leader	Positional authority/control (Manager) vs. Personal influence/vision (Leader).
Managerial Grid	Blake-Mouton 9x9 grid (Optimal style: 9,9 Team Management).
Tuckman's 5 Stages	Forming → Storming → Norming → Performing → Adjourning.
Groupthink	Phenomenon where pressure for conformity overrides critical appraisal of alternatives.
Delphi Technique	Decision-making technique using anonymous expert questionnaires.

One-Line Definitions for Exam Revision

- **Transformational Leadership:** Style inspiring followers to transcend self-interest for strategic organizational vision.
- **Group Dynamics:** The social interactions and behavioral forces operating within human groups.
- **Nominal Group Technique:** Structured group decision method restricting discussion during initial idea generation.
- **Groupthink:** Deterioration of mental efficiency and moral judgment resulting from in-group pressures.

Frequently Asked / Viva Questions

1. Define Leadership. How does a Leader differ from a Manager?

Leadership is the ability to influence a group toward achieving a vision. Managers rely on formal authority for stability; Leaders rely on personal influence to drive change.

2. Explain Blake-Mouton's Managerial Grid. Which position represents optimal leadership?

The grid plots Concern for Production vs. Concern for People on a 9x9 scale. Position (9,9) Team Management is the optimal style.

3. Differentiate between Transactional and Transformational Leadership.

Transactional leadership relies on contingent exchanges and rewards; Transformational leadership inspires followers to innovate and achieve visionary goals.

4. Trace Tuckman's 5 stages of group development.

Frequently Asked / Viva Questions (contd.)

Forming (orientation) → Storming (conflict) → Norming (cohesion) → Performing (functioning) → Adjourning (disbanding).

5. What is Group Dynamics?

The social forces, interactions, processes, and behavioral patterns operating within and between human groups.

6. What is Groupthink? How can it be prevented?

Groupthink is the pressure for conformity suppressing critical dissent. It can be prevented by assigning a devil's advocate and encouraging open feedback.

7. Explain the Delphi Technique of decision making.

A systematic decision method collecting anonymous opinions from distributed experts via sequential questionnaires without physical meetings.

8. What are the major advantages of group decision making over individual decision making?

Groups provide more complete information, diverse perspectives, creative alternatives, and higher implementation acceptance.

9. What is a Laissez-Faire leadership style? When is it effective?

A free-rein style granting complete operational freedom to subordinates. Effective only with highly expert, self-motivated professionals.

10. Describe the characteristic style of leadership in Indian corporate organizations.

Paternalistic leadership, which combines firm administrative authority with family-like personal care and nurturance.

Module 4

Meaning and Nature of Organizational Change

1. Meaning and Nature of Organizational Change

Organizational Change refers to the alteration of organizational structures, operational processes, corporate culture, technologies, or strategic goals in response to internal or external environmental shifts.

Definition of Organizational Change

Organizational Change is any alteration that occurs in the total organization environment (Keith Davis).

1.1 Nature of Change

- **Pervasive & Continuous:** Change is an ongoing reality in corporate life.
- **Systemic:** A change in one department impacts all interconnected sub-systems.
- **Reactive vs. Proactive Change:**
 - *Reactive Change:* Triggered by immediate crisis or market pressure.
 - *Proactive Change:* Anticipatory changes initiated to exploit future opportunities.

1.2 Factors Driving Organizational Change

Force Category	Driving Factors	Examples
External Forces	Globalization, market competition, technological disruption, economic shifts, regulatory changes.	Transition to cloud computing, AI automation, regulatory ESG compliance.
Internal Forces	Leadership shifts, strategic realignments, operational bottlenecks, low employee morale.	Mergers, new CEO vision, enterprise resource planning (ERP) rollout.

2. Resistance to Change and Overcoming Strategies

Resistance to Change is human or structural opposition to alterations in established routines, habits, or power balances.

2.1 Factors Causing Resistance

1. Individual Sources of Resistance:

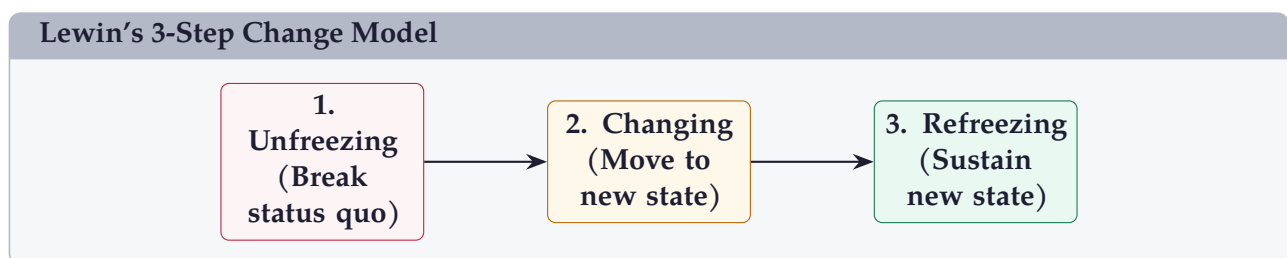

- *Fear of the Unknown*: Anxiety over new skill requirements or job security.
- *Habit*: Preference for familiar operational routines.
- *Economic Insecurity*: Concern over potential salary cuts or demotion.
- *Selective Perception*: Interpreting change information selectively.

2. Organizational Sources of Resistance:

- *Structural Inertia*: Rigid organizational structures designed for stability.
- *Threat to Expertise & Power*: Shifts threatening specialized group influence.

2.2 Lewin's 3-Step Change Model

Kurt Lewin proposed that successful organizational change follows three sequential steps:

1. **Unfreezing**: Disrupting the existing equilibrium by demonstrating the urgency of change and weakening driving forces of resistance.
2. **Changing (Moving)**: Implementing new processes, technology, structures, or behaviors.
3. **Refreezing**: Institutionalizing the new state by reinforcing positive behaviors through rewards, culture, and policies.

2.3 Kotter's 8-Step Leading Change Model

John Kotter proposed an 8-stage strategic framework for executing successful organizational transformations:

1. **Establish Urgency**: Highlight market realities and financial threats to motivate change.
2. **Form a Guiding Coalition**: Assemble a powerful team with position power and expertise to lead change.
3. **Create a Strategic Vision**: Develop a clear vision and strategic initiatives to direct transformation.
4. **Communicate the Vision**: Use all internal channels to communicate the vision and strategy.
5. **Empower Broad-Based Action**: Remove structural barriers and revise systems that undermine change.
6. **Generate Short-Term Wins**: Plan for visible, unambiguous performance improvements.
7. **Sustain Acceleration**: Consolidate gains and produce more change.
8. **Institute Change**: Anchor new behaviors in corporate culture and succession planning.

2.4 Strategies for Overcoming Resistance

- **Education & Communication:** Informing employees about change logic to reduce misinformation.
- **Participation & Involvement:** Involving employees in decision-making to build ownership.
- **Facilitation & Support:** Providing retraining, counseling, and stress management.
- **Negotiation & Agreement:** Offering incentives to powerful resistant groups.

3. Organizational Development (OD): Concept, Process, and Interventions

Definition of Organizational Development (OD)

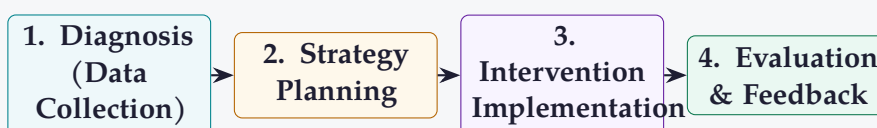

Organizational Development (OD) is a systematic, long-term, top-management-supported effort to improve an organization's vision, empowerment, learning, and problem-solving processes through organizational culture management (Wendell French).

3.1 Core Objectives of OD

- Build high organizational trust, openness, and collaborative problem-solving capacity.
- Align organizational structure and culture with technological and strategic demands.
- Enhance employee satisfaction, motivation, and personal growth.

3.2 The 4-Stage OD Process

The 4-Stage OD Process

3.3 Major OD Interventions

Intervention Type	Description & Operational Focus
Team Building	Structured activities designed to improve interpersonal trust, goal clarity, and team cohesion.
Sensitivity Training (T-Groups)	Unstructured group interaction sessions aimed at increasing self-awareness and interpersonal sensitivity.
Process Consultation	An outside consultant assists managers in perceiving, understanding, and acting upon process events (e.g., meeting dynamics).
Survey Feedback	Systematic collection of data via questionnaires, followed by feedback sessions to diagnose operational issues.

Quick Revision — Module 4

Organizational Change & Development | OE-EC804C

Key Concepts and Metrics at a Glance

Lewin's Change Model	3-stage process: Unfreezing (break status quo) → Changing (movement) → Refreezing (institutionalization).
Resistance Factors	Individual (fear, habit, economic security) vs. Organizational (structural inertia, threat to power).
OD Definition	Planned, long-term, culture-focused effort to improve organizational effectiveness.
OD Process Stages	Diagnosis → Strategy Planning → Intervention → Evaluation.
OD Interventions	Team Building, Sensitivity Training (T-Groups), Process Consultation, Survey Feedback.

One-Line Definitions for Exam Revision

- **Unfreezing:** Breaking down the existing status quo to prepare individuals for organizational change.
- **Refreezing:** Reinforcing and institutionalizing new behaviors to make change permanent.
- **Process Consultation:** Intervention where a consultant helps managers observe and act upon internal communication and team dynamics.
- **Structural Inertia:** Built-in organizational mechanisms (rules, structure) that act as barriers to change.

Frequently Asked / Viva Questions

1. **Define Organizational Change. Distinguish between Reactive and Proactive change.**
Organizational change is the alteration of structures, processes, or culture. Reactive change is triggered by immediate external pressure; Proactive change is planned in advance to capture opportunities.
2. **Explain Lewin's 3-Step Model of organizational change.**
The model consists of Unfreezing (breaking the status quo), Changing (moving to the new state), and Refreezing (reinforcing and institutionalizing the change).
3. **What are the primary individual causes of resistance to change?**
Fear of the unknown, habit, threat to economic security, anxiety over skill competence, and selective perception.
4. **What are the primary organizational causes of resistance to change?**

Frequently Asked / Viva Questions (contd.)

Structural inertia, limited focus of change, threat to specialized expertise, and threat to established power relationships.

5. List four key strategies for overcoming resistance to change.

Education and communication, employee participation, managerial facilitation and support, and incentive negotiation.

6. Define Organizational Development (OD). What are its main objectives?

OD is a planned, long-term, top-management-driven effort to improve organizational effectiveness through culture management. Objectives: build trust, openness, and problem-solving capacity.

7. What are the 4 stages of the OD process?

Diagnosis (data gathering) → Strategy Planning → Intervention Execution → Evaluation and Feedback.

8. Explain Sensitivity Training (T-Groups) as an OD intervention.

An unstructured group interaction technique designed to increase self-awareness, empathy, and interpersonal communication skills.

9. What is Survey Feedback in OD?

A diagnostic intervention where data is collected from employees via questionnaires, analyzed, and presented back to teams to identify operational problems.

10. Why is Team Building considered a critical OD intervention?

It improves interpersonal trust, role clarity, and communication, transforming individual workers into a cohesive, high-performing team.
